

How do I move a survey into another folder?

There is no easy way to copy or move a survey into a specified folder. The copied survey will appear in the same folder as the original survey. The only way to do this is to export/import the survey into a new folder.

An implementation of an easier way to do this is on our to-do list. Copying/moving surveys between folders may seem like a straightforward process, but is complicated by existing permissions to the original survey/folder, the new folder and the copied survey.
