> Also, do you have any documentation yet on this app and what question types it does/doesn't support and any limitations it may have on a normal survey and how you configure it?

Generally there is no documentation, but app is very easy to use and self-explaining.

The question types supported are: Rating, Multiple Choice, Dropdown, Numeric, Free text. In-text fields and matrix question type are not supported.

It is very easy to configure: you only need to enter your Opinio server address, username and password in the Settings app, and then you can browse your surveys, polls and folders, and run surveys from the Opinio server.

The opino version required is 6.4.

Best Regards,
